                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

NOTE: This is a "working draft' sequence. It currently consists of 42 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N. but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            as soon as it is available and the accession number will be preserved.

                        The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: mr. PMBL. SN: SNISSPROT; Tr: TREMEL; Wp: WORMPDP; Information on the WOMMPDP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 6. constructed by the Sanger Centre Chromosome 6. constructed by the Sanger Centre Chromosome 6 constructed by the Sanger Centre Chromosome 6 was plant of the Sanger Centre Chromosome 6 was plant of the Sanger Centre Chromosome 6 was plant of the Sanger Control of the Roswell Park in the Chromosome 6 was plant of the Roswell Park provided by the Chromosome 6 was plant of the Roswell Park provided by the Chromosome 6 was plant of the Roswell Park provided with the Chromosome 6 was plant of the Roswell Park provided with the Roswell Park provided was plant of the Roswell Park provided with the Roswell Park provided was plant of the Roswell Park provided wa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                requests: clonerequestesanger.ac.uk
On Aug 22, 2000 this sequence version replaced gi:7228316.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.
                                                                                                                                                                                                                                                                                                                                                                                                                                  annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CB10 1SA,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Eukaryota; Metazoa; Chordata; Craniata; Vertebrata;
